Cadorath Repositions Plating Division with New Name

Winnipeg, MB – The Cadorath Group announced today that its oldest division, Cadorath Plating, has been renamed Cadorath Coating.

“With the recent purchase of National Coating Technologies’ assets and the hiring of several of NCT’s key employees, we’ve expanded our range of plating and coating services considerably,” explains President and CEO Gerry Cadorath. “We now have equipment for both powder-based and liquid-based applications under one roof. We feel that the word Coating more accurately reflects the diversity of our new capabilities.”

Cadorath Coating now has a full range of thermal spray equipment for plasma, powder and wire flame, and arc wire applications. In addition, Cadorath has acquired equipment for cold spray, the newest technology in the field of thermal spray coating. Cadorath has also added both a powder coating and a wet paint line to their Zinc Department. “With these additions we are now the only company in North America offering 50 coating process options to AMS and OEM specifications,” says Cadorath.

“Our new coating capabilities also required that we rethink what other kinds of grinding and machining expertise we needed from our Machine Shop so we could truly support all our customers’ repair and overhaul requirements. We added capability there as well.”

These changes are part of a larger “responsible growth strategy” that has included over \$10 million invested to date in emission and pollution control equipment, as well as processing improvements targeted to reduce Cadorath’s environmental footprint. These changes have made a significant impact; for example, their Zinc Plating Department can process over 40,000 lbs of metal per shift. Cadorath also offers environmentally friendly, green coating alternatives.

Cadorath Coating’s diverse customer base includes global clients in aerospace, manufacturing, heavy industry and commercial business. This year marks their 57-year anniversary.
