## Press Release

May 13, 2011

### Performance Results of UltraFlyte Auger Released

Winnipeg, MB – In an independent durability test conducted by the Prairie Agricultural Machinery Institute (PAMI), Cadorath Uniflyte's UltraFlyte™ auger lasted 50% longer than the leading competitor with Super Edge flighting.

“When we designed the auger we wanted to achieve two things,” says Uniflyte General Manager Robert Wynnobel. “We wanted UltraFlyte to be the most durable auger on the market as well as the most efficient. We’ve done both. The redesigned flight face in combination with the thicker leading edge makes the flighting harder and tougher which contributes to its durability.”

The UltraFlyte is also more efficient. In a separate series of speed tests using an 8-inch auger, the UltraFlyte moved up to 90 bushels per hour more than the competition. “Our unique, patented, concave design helps carry more material. By changing the direction of the material as it moves up the concave, the material is pitched away from the thickened edge which prevents excessive wear of the outer edge,” explains Wynnobel. “Our auger moves more material and does so over a longer period of time. It’s just flat out better and...our customers don’t pay a premium for the extra performance.”

Cadorath Uniflyte, serves the North America market from facilities in Winnipeg, MB and Orion, Illinois. It is a major provider of auger conveyance, material handling and fabrication products. For more information on the PAMI tests, visit [Cadorath.com](http://Cadorath.com).
